

# Brain Cancer Facts

Children are being left behind during an age of new breakthrough treatments. We are working to change this.

0

Number of FDA-approved drugs for children with brain cancer in the past 20 years.

In the last 20 years, there has been approximately 125 new drugs approved to treat adults with cancer.

95%

Percent of children who survive cancer that will have a significant health condition by age 45 as a direct result of toxicities from their treatment.

6.5

Number of years it takes for cancer drugs approved by the FDA to go from the first clinical trial in adults to the first trial in children.

#5

Nationally, Nebraska has the 5th highest incidence rate per capita, and even more alarming is that we have the highest mortality rate in the United States.
